The blue whale is the biggest animal that has ever lived. It's bigger and heavier than the biggest dinosaur ever was. The largest of the dinosaur is thought to have weighed about 50 tons, while the blue whale may weigh over 150 tons, and grow to over 100 feet long!

In fact, when a blue whale is born, it is already bigger than an adult elephant.

In summer blue whales stay in cold water near the North or South Poles. In winter they move into warmer parts of the ocean. They travel either alone or in small groups of three or four called pods.

Blue whales are now protected by law. All the major whaling nations of the world are members of the International Whaling Commission. They have agreed that they will not hunt blue whales. But many scientists believe that there is no way of stopping blue whales from becoming extinct. So it may not be long before the blue whale joins the dinosaur as a museum specimen, with no living specimens left. And if you want to hear the song of the blue whale, you will have to listen to a record, for the whales won't be singing any more.

What is special about the blue whale?

- B. Skin
- C. Color

Out of his magic wand came flowers, ribbons and garlands of every possible colour and seemingly unending length. It came in such quick succession that everyone was left gasping. One or two young children came up to examine the thin stick wondering how it could hold so much. They were really frustrated. As if that was not magical enough he made a rabbit pop out of an empty wooden box. It went hopping around the stage. It was soon put back into the box and seconds later, he pulled out a rat, soft, white and squeaking. The little ones seemed a little frightened by this, while the others clapped and cheered loudly. This was the grand finale.

The children did not want it to end. They shouted 'encore', 'once more'. But Kim gave them a bright smile and vanished from the scene. The children were left searching here and there for him.
